

# ***FOR IMMEDIATE RELEASE***

## **FIRE SUPPRESSION SYSTEM PROTECTS FLAMMABLE LIQUIDS STORAGE CABINETS**

A self-contained fire suppression system that automatically detects and suppresses a fire inside of a flammable liquids storage cabinet is being introduced by Firetrace<sup>®</sup> International of Scottsdale, AZ.

Firetrace<sup>®</sup> Automatic Fire Suppression Systems for flammable liquids storage cabinets are totally self-contained and feature a flexible, polymer tubing which can be routed anywhere within a cabinet up to 250 cu. ft. Armed with 3 to 20 lbs. of a fire suppression agent, when this system's proprietary detection tubing is exposed to a flame, it automatically ruptures to form a nozzle and instantly dispenses all of the fire suppression agent.

Requiring no electricity or external power, Firetrace<sup>®</sup> Automatic Fire Suppression Systems can be configured to trigger a building's fire alarm. The fire suppression agent such as FM-200<sup>®</sup>, CO<sub>2</sub>, dry chemical powders, or foam, and the volume, as well as the length of tubing appropriate for the storage cabinet are selected by the customer.

Firetrace<sup>®</sup> Automatic Fire Suppression Systems are priced according to type of suppression agent, cylinder size, and tubing requirements. Literature and price quotations are available upon request.
